

ORGANIC SULFUR CRYSTALS ARE A MIRACLE FOOD THAT PROVIDES AMAZING HEALTH BENEFITS

In order to achieve and maintain truly vibrant health, the cells in your body need plenty of oxygen. But most of the foods people eat lack the basic nutritional elements that not only provide this oxygen, but that facilitate its movement throughout the body and amongst the cells. This is where sulfur comes in. Sulfur is a nutrient compound found in all living organisms that is absolutely vital for proper health, but most of us fail to get enough of it, even when trying to eat healthy.

Prior to the days of petro-chemical fertilizers, farmers applied animal manure to crops, which enriched soil naturally with high levels of sulfur. But today, the industrialized farming methods employed by the large agri-giants that grow most of our food have virtually eliminated necessary sulfur from not only the soil, but from food itself. And what little sulfur is left in food gets eliminated through processing, refrigeration, dehydration and cooking.

Some NaturalNews readers are probably already familiar with methylsulfonylmethane (MSM), the chemical name for sulfur, and some may already take this supplement, but did you know that many powdered supplement versions of MSM have lost most of their potency due to processing? When sulfur crystals are converted into powdered form, as most are, they lose about 85 percent of their effectiveness. And they become even less effective when synthetic anti-caking agents are added.

Some of the many benefits of organic sulfur crystals include:

- Increasing enzyme production within bodily glands and improving resistance to illness
- Increasing flexibility in muscle tissue
- Increasing blood circulation
- Reducing muscle inflammation and promoting muscle healing
- Promoting the healthy growth of hair and fingernails
- Discouraging the growth of cancer cells through oxygenation
- Reversing osteoporosis, Alzheimer's disease and Parkinson's disease
- Promoting healthy skin production and reducing wrinkles
- Regulating insulin production
- Improving colon function and eliminating colonic parasites

Twelve years ago, researchers began the Cellular Matrix Study, the purpose of which is to evaluate the effects of sulfur on cell regeneration. Patrick McGean, director of the study, had successfully used organic sulfur crystals to cure his son's terminal germ cell testicular cancer.

Since it started, the study has found that people from around the world have experienced similar incredible results from taking organic sulfur crystals. Diabetics have significantly lowered or even eliminated the need for taking insulin, people with high blood pressure no longer need medication, and people with osteoporosis have reversed their bone loss.
